

Best Use of Redis Prize

- Mac Minis (one for each team member)
- 25k Redis Cloud credits for team
- Redis Timbuk2 backpacks

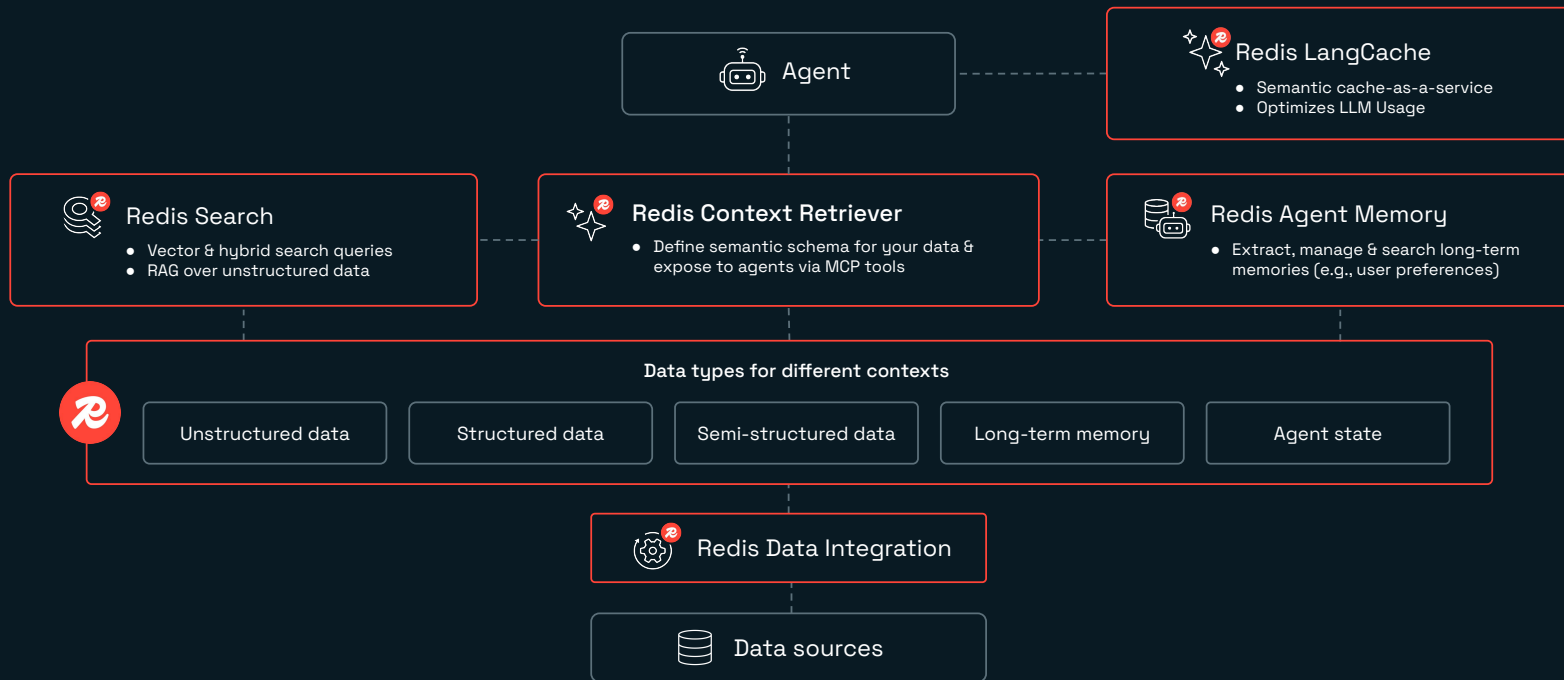

Prize Qualification

- You are using any of our qualified tools and this is demonstrated clearly in your demo and github repo:
 - Redis Cloud
 - Redis OSS
 - RedisVL
 - Agent Memory Server
 - Redis AI Incubator tools
- Built THIS WEEKEND
- No plagiarism

Judging Criteria

- Using Redis Beyond Caching: leveraging our AI tools like Redis Iris for Agent memory, vector search, context retrieval
- Creativity and originality: solving real human problems in ways we haven't seen before, has a fun factor
- Technical Implementation: Quality and sophistication of the engineering, Correctness, scalability, and architecture.

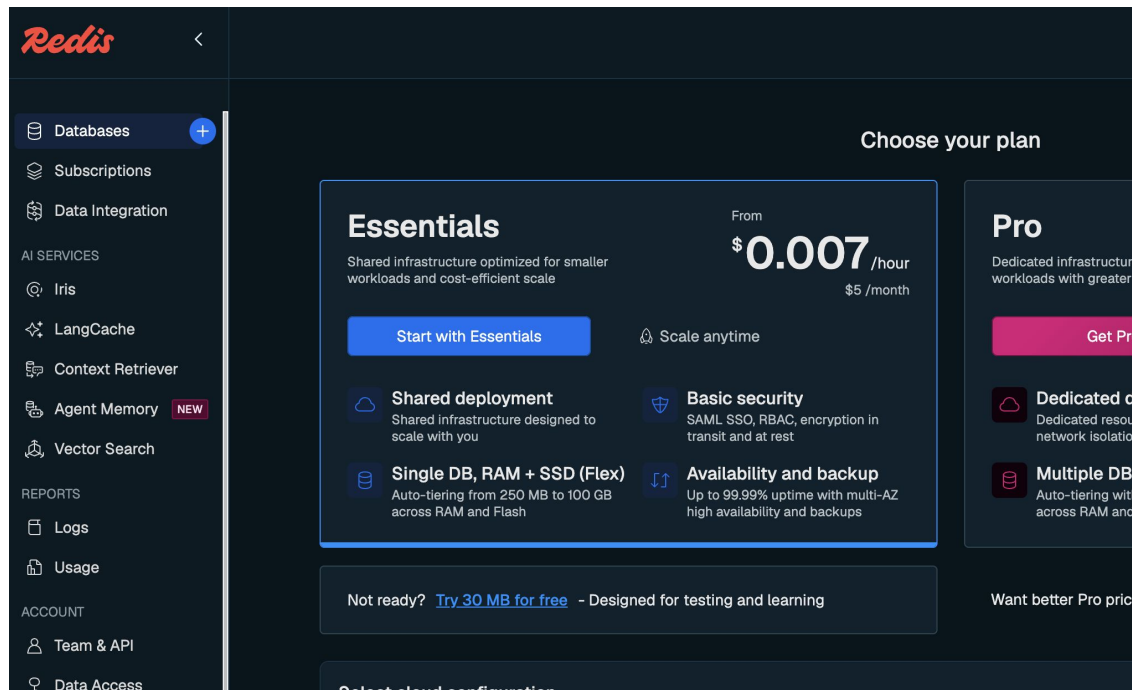

Redis is a **real-time context engine** built for fast, accurate AI apps.

Setting up a Redis Cloud Account

redis.io/login

- Create an account
- Select + Database
- Select Essentials Tier (best for this hack)
- Set up database size and Cloud service provider (we recommend turning off High Availability)
- Add code for \$50 credits: **CALHACKER2026**
- Hit "Confirm & Pay" (this will use your credits)

Getting started - Agent Skill

We built an Agent Skill so AI writes Redis code the way Redis experts would

`npx skills add redis/agent-skills`

```
> Can you write a langcache example for me

● Skill(redis-best-practices)
  └─ Successfully loaded skill

● Searched for 1 pattern, read 1 file (ctrl+o to expand)

● Here's a complete LangCache example for semantic caching of LLM responses:

from langcache import LangCache
import os
from openai import OpenAI

# Initialize clients
lang_cache = LangCache(
    server_url=f"https://{os.getenv('LANGCACHE_HOST')}",
    cache_id=os.getenv("LANGCACHE_CACHE_ID"),
    api_key=os.getenv("LANGCACHE_API_KEY")
)

openai_client = OpenAI(api_key=os.getenv("OPENAI_API_KEY"))
```

RedisVL

Redis Vector Library

[Python](#) | [Java](#)

A powerful, dedicated Python client library for using Redis as a vector database.

- **Free to use**, just
pip install redisvl
- **Easy to deploy** GenAI solutions
with simple abstractions
- **Built on Redis** so you benefit
from all our speed and
ecosystem integrations

Vector
database

Semantic
cache

LLM
memory

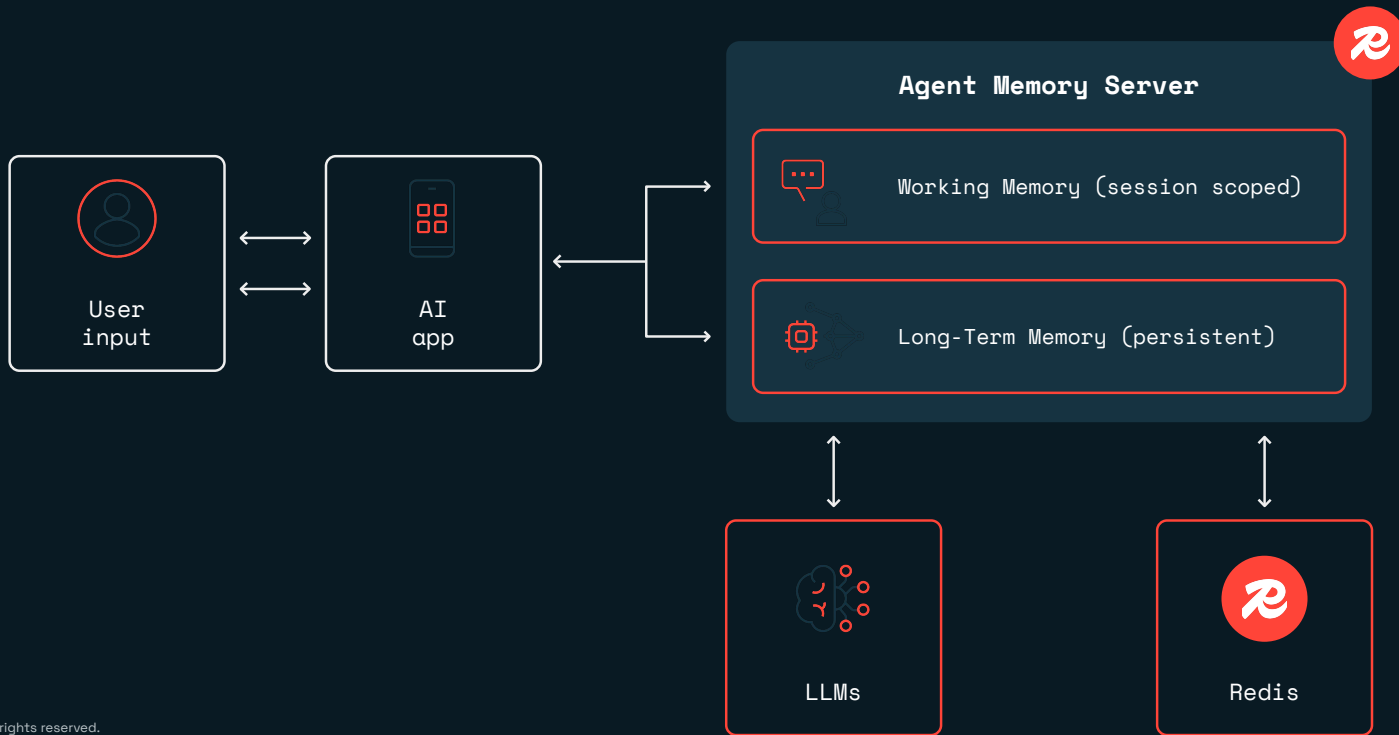

Semantic
routing

Agent Memory Server

RESTful API and MCP server for managing dual-tiered agent memory across sessions.

<https://github.com/redis-developer/agent-memory-server>

Redis AI Incubator

One stop shop for all of our
experimental tools

<https://redis.io/ai-incubator/>

Experimental releases

- Agent Memory Server
- a2a-redis
- adk-redis
- Claude-mcp-redis

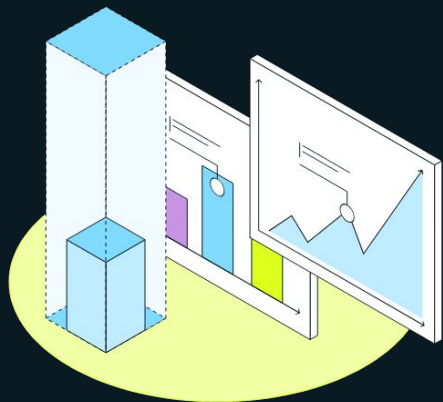

Reference agents

- Redis-ai-resources
- Redis-sre-agent
- redis-slack-worker-agent

Scale your startup faster

This program offers everything growing businesses need to build fast apps fast.

To qualify, you must be a venture-backed, seed or below startup.

For more information:
redis.io/startups

Free Redis for qualifying startups

Take advantage of exclusive benefits to help your business build fast apps and scale earlier.

- Up to \$25k Redis Cloud Credits
- Early access to new Redis features and products

Access to Redis support

Partner with our experts, mentors, and fellow startups to design apps that succeed at scale, perform seamlessly, and more.

- Dedicated customer support, including monthly office hours and a basic support plan
- Learn from our industry-leading applied AI team

Build your brand and go to market

Use our network of customers, partners, and industry connections to grow your go-to-market strategy.

- Access co-marketing opportunities and lead generation programs
- Meet potential investors and customers

Redis Startup Program

Thank you.
